

2003 Nissan Maxima 3.5L V6

Compressor Options: 6512185 and 6511696

gpd offers two compressor replacements for the 2003 Nissan Maxima 3.5L V6 with key differences in mounting styles.

- **Direct Mount Compressor: 6512185** is a Calsonic CWV618 style replacement compressor that is mounted directly to the side of the engine. The original mounts and bolts will need to be reused when replacing the compressor. Take note of the original location of each bolt to be replaced as they vary in size. Incorrect replacements could damage the engine and/or compressor function.

6512185

Please Note:
Two mounting adaptors and two sets of bolts varying in size are needed to install this compressor.

Identify the correct bolt(s) and check mounting adaptors for damage before replacing.

- **Ear Mount Compressor: 6511696** is a Diesel Kiki DKS17D style replacement compressor with an ear mount at the front of the compressor and a direct mount at the very rear of the compressor. The front ear mounts connect to the front of the engine, while the rear direct mounts are bolted to the side of the engine. Unlike, 6512185, this compressor has built in mounts rather than mounting adaptors.

Rear direct mounts
