

2007–2011 Dodge Nitro (2WD)

Evaporator: 4711885

Replacing the evaporator can be a time-consuming repair due to its location behind the dash. To avoid repeat replacement, it is important to identify and order the right replacement parts. Some aftermarket evaporator replacement options in the market for the 2007–2011 Dodge Nitro (2WD) are not designed to meet OE specifications. These evaporators will be noticeable smaller with foam tape added around the evaporator as a “quick fix” for the small design. Aftermarket replacement evaporators with “quick fix” foam tape used to compensate for a smaller design may cause A/C system damage such as:

- ⊗ Over time, the foam will break down and get trapped in and around the evaporator, blocking air flow to the cabin and/or restricting refrigerant flow.
- ⊗ If the replacement evaporator is smaller than the original design, the system may be overcharged if the original refrigerant charge is used.

gpd evaporator, 4711885, is an aftermarket replacement for the 2007–2011 Dodge Nitro (2WD) designed with the original evaporator dimensions to create a secure seal without the use of foam tape.
