

How it Works

Intercoolers

Most engines with a turbocharger or supercharger should use an Intercooler to make the forced induction system more efficient. Intercoolers increase the density (oxygen content) of the air supplied to the engine by cooling the air compressed by the turbocharger or supercharger. By reducing the temperature and pushing more oxygen-rich air to the engine, more fuel can be burned to improve combustion and give the engine more power. Air-to-Air Intercoolers extract heat from compressed air through a network of tubes with cooling fins. Cool high-flow air from the outside absorbs heat from the cooling fins to reduce the temperature of the compressed air passing to the engine.

gpd intercoolers are leak tested, designed to meet or exceed OE fit, form and function, and durability tested on every new design.

Top Selling Intercoolers	
Part No.	Application
2711239	2011–2016 Chevrolet Cruze
2711234	2010–2012 Dodge Ram
2711288	2013–2018 Dodge Ram
2711249	1999–2003 Ford F-Series Super Duty
2711244	2008–2010 Ford F-Series Super Duty
2711248	2013–2018 Ford Focus
2711293	2015–2017 Ford Expedition
2711291	2015–2019 Ford F-150
2711327	2017–2020 Honda CR-V
2711282	2006–2014 Volkswagen GTI
